

SIMPLIFYING ASSET MANAGEMENT

We use non-invasive marking methods to help its customers track and manage their assets. With our software, users can create their own word orders, inspect their assets and geospatially locate their assets in real-time, providing users with critical information to prevent down-time and a reduction in overall operating costs. Returning dollars back to your bottom-line with real-time tracking.

- Provides 100% Traceability

Customized Solutions

- Dashboard Development
- Supply Chain Analysis
- Systems Integration
- Data Management
- Document Management Systems and Control

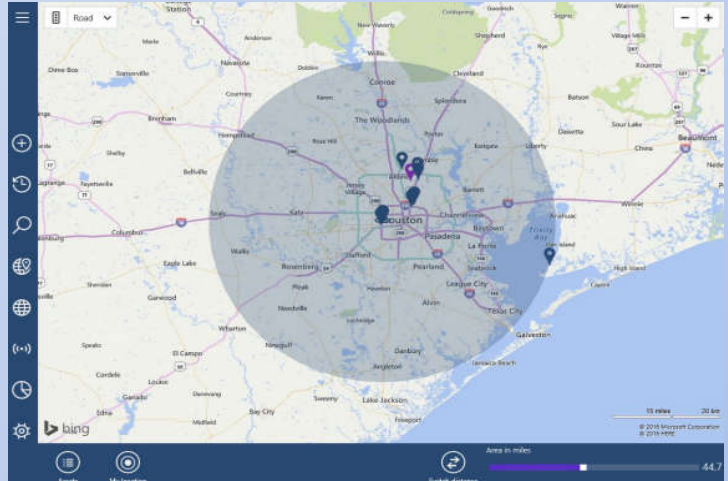

INFORMATION TECHNOLOGY SOLUTIONS THAT WORK FOR YOUR BUSINESS

Our staff will work with your organization to define your asset and supply chain strategies leading your organization to real-time tracking of assets along with their maintenance history. Working with key cross-functional personnel to identify key issues within your maintenance and supply chain departments, we will enhance the visibility of your drilling, piping, production and fleet spare components.

Our goal is to help organizations understand what assets they have, where these assets are located and their current place in their life cycle to remove redundant or excessive purchases while reducing workload for all cross-functional teams involved in the asset management process.

SIMPLIFYING ASSET MANAGEMENT

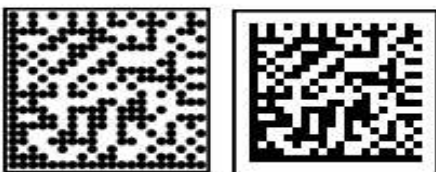

Geospatial Asset Mapping and Location Services

Asset Tracker Software is an easy to use system that can be fully integrated into your existing ERP or can be used as a standalone Asset Management System. Asset Tracker was designed for use on multiple operating systems to allow users to access Asset Tracker from any device any where from your existing mobile device.

Our Methodology

DATA MATRIX

INDUSTRIAL GPS

UHF RFID

Combining extensive Supply Chain, Information Systems, Change Management and Process Management expertise, we deliver world class ground breaking technology solutions which revolutionize the way assets are identified, managed, and tracked.

- The tagging methodology allows the application of stencils or RFID tags on assets through a non-invasive process that can be applied at any stage in the supply chain even under the harshest and most testing conditions.
- Assets are physically tagged with a unique ID code which can be read and tracked throughout life cycle of the Asset.
- A dynamic, adaptable, easy to use, and rapid to implement software solution supports management of assets including data capture, mobility, geospatial, and reporting capabilities.
 - Assets can be scanned, tracked, viewed and updated directly within our map functionality
 - Additional attributes, values, and documents can be captured and attached against the unique ID to enrich information about the Asset.

Our comprehensive business intelligence solution combines flexibility with user defined inquiry capability to allow multi dimensional queries and report generation for all levels of an organization.
